### **PCT**

### NOTIFICATION CONCERNING **SUBMISSION OR TRANSMITTAL** OF PRIORITY DOCUMENT

(PCT Administrative Instructions, Section 411)

To:

JOHN AND KERNICK P.O. Box 3511 1685 Halfway House AFRIQUE DU SUD

06 December 2000 (06.12.00)	
Applicant's or agent's file reference P 13746 PCT	IMPORTANT NOTIFICATION
International application No.	International filing date (day/month/year)
PCT/ZA99/00106	05 October 1999 (05.10.99)
International publication date (day/month/year)	Priority date (day/month/year)
13 April 2000 (13.04.00)	05 October 1998 (05.10.98)

- The applicant is hereby notified of the date of receipt (except where the letters "NR" appear in the right-hand column) by the International Bureau of the priority document(s) relating to the earlier application(s) indicated below. Unless otherwise indicated by an asterisk appearing next to a date of receipt, or by the letters "NR", in the right-hand column, the priority document concerned was submitted or transmitted to the International Bureau in compliance with Rule 17.1(a) or (b).
- 2. This updates and replaces any previously issued notification concerning submission or transmittal of priority documents.
- An asterisk(\*) appearing next to a date of receipt, in the right-hand column, denotes a priority document submitted or transmitted to the International Bureau but not in compliance with Rule 17.1(a) or (b). In such a case, the attention of the applicant is directed to Rule 17.1(c) which provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.
- The letters "NR" appearing in the right-hand column denote a priority document which was not received by the International Bureau or which the applicant did not request the receiving Office to prepare and transmit to the International Bureau, as provided by Rule 17.1(a) or (b), respectively. In such a case, the attention of the applicant is directed to Rule 17.1(c) which provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.

### VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted: see separate sheet

### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

# INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

Reference is made to the following documents (Di):

D1: GB-A-2 256 771 (CABLE SRL) 16 December 1992 (1992-12-16)

D2: US-A-4 326 221 (MALLOS GENE G ET AL) 20 April 1982 (1982-04-20)

### Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- The applicant has modified the claims under Article 19 PCT by omitting the word 1 "video" from the term "video camera".
  - The scope of the relevant claims has therefore been extended, since no basis for a camera different from a video camera can be found in the application as filed. Hence the claims as amended result in the application being amended in such a way that it contains subject-matter which extends beyond the content of the application as filed, contrary to Article 34(2)(b) PCT.
  - According to Rule 70.2 (c) PCT this report is established as if the above mentioned modification has not been made. Hence, every time the term "camera" is mentioned in the claims, the "camera" is considered as being a "video camera".
- The present application does not meet the requirements of Articles 33(1) and (3) 2 PCT, because the subject-matter of independent system claim 1 does not involve an inventive step.
- The present formulation of independent system claim 1 is such that it appears that 2.1 the following parts of its subject matter can be read onto prior art document D1, which relates to a remote surveillance system (abstract; figure 4).
  - In particular, document D1 discloses a video camera (figure 4, object 23) connectable to a portable wireless transceiver (figure 4, object 10) for transmitting a signal from the camera to a signal repeater (figure 4, object 12).
  - D1 further discloses that the signal from the camera is transmitted over a telephony communication system (figure 4, objects 7,12) to a second transceiver (figure 4, object 29) arranged to receive the signal and to display it on a display

means (figure 4, object 28).

D1 further discloses the exchange of commands (page 9, lines 7-12, lines 27-33).

2.2 The subject matter of claim 1 differs from D1 in that both end systems of the communication link comprise an audio communication device for transmitting voice signals from the base station to the remote site.

However, this feature is merely one of several straightforward possibilities from which the skilled person would select, in accordance with circumstances, without the exercise of inventive skill, in order to transmit control commands to the remote site e.g. for changing the camera position.

D2 mentions two possibilities for enabling a remote controlling a camera, a manual concept: column 1 lines 22-26 and an automated concept: figure 1, objects 16, 30, 32, 34, 36, 26.

- 2.3 The additional features of dependent claims 2-5 are either disclosed by D2 (claim 2 see D2, column 1, lines 22-26) or seem to be implementation measures not involving any special technical effect. Hence, the additional features of claims 2-5 do not add anything inventive to claim 1.
- 2.4 The method steps of independent method claim 6 correspond to the already discussed structural features of independent system claim 1. Claim 6 is, therefore, not inventive.

### Re Item VII

# Certain defects in the international application

- In order to meet the requirements of Rule 6.3(b) PCT the independent claims should have been cast in the two-part form, with those features which in combination are disclosed by document D1 being placed in a preamble Rule 6.3(b)(i) PCT and with the remaining features being included in a characterising part, Rule 6.3(b)(ii) PCT.
- 2 In order to fulfil the requirements of Rule 5.1(a)(ii) PCT, documents D1 to D2

# INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

should have been identified in the introductory part of the description and the relevant background art disclosed therein should have been briefly discussed, preferably in such a way that the inventive merit of what is claimed can be readily understood.

- The description (summary of invention) should have been filed in conformity with 3 the claims, Rule 5.1(a)(iii) PCT. The summary of the invention mentions features of the invention e.g. that the signal repeater is located in an aeroplane. These features cannot be found in any claim. Hence, they should have either been omitted or drawn up in a claim for consistency reasons.
- Reference signs placed in parentheses should have been inserted into the claims 4 to increase their intelligibility (see Rule 6.2(b) PCT). This applies to both the preamble and the characterising portion.

### Re Item VIII

# Certain observations on the international application

- Independent system claim 1 does not meet the requirement following from Article 1 6 PCT taken in combination with Rule 6.3 PCT, that any independent claim must contain all the technical features essential to the definition of the invention.
  - In view of the description (see page 4, lines 14-24), it seems that the presentation of the voice signals by the second audio communication device to the camera operator and that said voice signals contain operation commands for the camera indeed represent essential features to define the invention. None of these technical features are presented as optional anywhere in the description and they should therefore be included in the independent claim 1.

In fact, these features could have partially been drawn from dependent claim 2.

The same objection is also valid for the corresponding method claim 6.

# **EXAMINATION REPORT - SEPARATE SHEET**

Additionally, independent method claim 6 lacks another method step essential to 2 the definition of the invention.

In view of the description (see page 4, lines 8-13), it seems that the transmission of the signal from the video camera to the base station represents an essential method step to define the invention. This method step is not presented as optional and it should have therefore been included in independent claim 6.

PCT/ZA99/00106 WO 00/21269

### AMENDED CLAIMS

[received by the International Bureau on 14 April 2000 (14.04.00); original claims 1-3, 5-7 amended; original claims 4, 8 and 9 cancelled; original claims 5-7 renumbered as claims 4-6; (2 pages)]

- 1. A communication system comprising a camera connectable to a portable wireless transceiver for transmitting a signal from the camera to a signal repeater, from which the signal is transmitted over a telephony communication system to a second transceiver arranged to receive the signal and to display it on a display means, and a first audio communication device connectable to the second transceiver for transmitting a voice signal over the telephony communication system to the signal repeater and from the signal repeater to the portable wireless transceiver and to a second audio communication device connected to the portable transceiver.
- 2. A communication system as claimed in claim 1 in which the camera is electronically controllable through voice instructions transmitted from the first audio communication device.
- 3. A communication system as claimed in any one of the preceding claims in which azimuth and elevation of the camera are electronically controllable through voice instructions transmitted from the first audio communication device.
- 4. A communication system as claimed in in any one of the preceding claims in which the audio communication devices provide at least a one way voice communication link from the first audio communication device to the second audio communication device.
- 5. A communication system as claimed in claim 4 in which at least the second audio communication device includes a headset having a loudspeaker.
- 6. A method of inspecting a remote site with a communication system comprising the steps of connecting a camera and a second communication device to a portable wireless transceiver at the remote site, connecting a signal repeater at the remote site to a telephony communication system, connecting a second transceiver at a base station to the telephony communication system, connecting a display means to the second transceiver and connecting a first audio communication device to the second transceiver, displaying a signal from the camera at the remote site on the display means and transmitting a voice signal from the first audio communication device

over the telephony communication system to the signal repeater and to the second audio communication device connected to the wireless transceiver.
